MUSEUM CLASS

Concept sketch for an intensive educational learning group in the ReBBZ Harburg
Elaboration: Ute Döpke (gangway), Astrid Römelt (ReBBZ Harburg)

1 Introduction

A museum is full of treasures! And elementary school kids love treasure!
Bringing this together and connecting it is the core idea of the Harburg museum class, i.e. a partnership between the education department of the ReBBZ Harburg and the museums in Harburg and the surrounding area.
Partnership between primary schools and museums - this idea originated in Great Britain. The aim is to bring education and culture closer together and to interweave them by teaching elementary school classes in a museum over a longer period of time.
The museum class is a schooling offer for primary school children with special support needs, whose attendance at a regular school is endangered or temporarily not possible.

2. Cultural education and participation

Many pupils in the education department of a ReBBZ or a temporary learning group only find access to culture through school, as their families cannot enable them to do so. Cultural education supports personal development by helping to discover / expand one's own strengths, strengthening self-confidence and also promoting curiosity and creativity. In this way, it makes an important contribution to general education and social participation.
Under the heading “Metropolitan Region”, the government parties in Hamburg emphasize the importance of cultural participation in their cooperation agreement of June 2020 and also cite the museums in this context. There are several interesting museums in the Harburg district and the surrounding area (Harburg district) - the open-air museum at Kiekeberg, the former Helmsmuseum, now AMH (Archaeological Museum Hamburg and City Museum), the Museumshafen Harburg e.V ..
In the 2020/2021 school year, extracurricular learning locations will gain additional importance, as the implementation of the security precautions relating to Covid-19 is often difficult with the existing room capacities in schools. This is particularly true for the education department of the ReBBZ Harburg, where the rooms are tight even during normal teaching times.

3. Initial situation

The experiences of the past two school years show that the 6 - 8 year old children in the temporary learning group “The little ones” make great progress and can partially make up for their developmental delays. However, it continues to be difficult to find an appropriate follow-up perspective for these children - reintegration into a regular class is only rarely successful. Specifically, this currently applies to two boys who are now in their fourth year of school attendance, because the initiation of reintegration has so far been due to internal family constellations and problems (lengthy processes in advising families, parental consent to measures such as inpatient admission to the KJP or removal to work out from the family and accommodation in a group living) had to be postponed for a long time.
At the same time, a student with a complex burden (foster child, former TLG student) was able to stabilize in individual lessons during the past school year. He succeeded in doing this through continuous 2: 1 schooling and care (2 adults - one child). Now he can and should take the next step, i.e. be slowly introduced to schooling with a few other children (the foster parents have given their consent).

4. Target audience

In the museum class, children between the ages of 8 and 11 should be schooled, i. H. Schoolchildren in grades 3 - 5. The children are all affected by serious emotional and social

problems that are associated with suffering and impairments. As a rule, families receive intensive support from the youth welfare office for several years before they are accepted into the project, as the parent-child relationships are heavily burdened (e.g. emotional neglect, foster children, trauma, symbiotic parent-child relationships, etc.). Therefore, attending a regular school is still / temporarily not possible.
For the start, it is planned that, together with the above-mentioned child, a boy friend from the education department (class 6) who is emotionally very slow in development will be accepted. In addition, two more boys from the TLG, who need the protection of a small group and for whom reintegration would currently still be clearly overwhelming, are to be trained in the museum class.

5. Goals
Develop, strengthen and stabilize self-worth and identity
Enable self-efficacy experiences
Expand and increase communication skills
Promote curiosity and creativity
Build and expand confidence in your own ability to learn and work
Increase your ability to concentrate
Increase the sense of belonging to the community (small group) and to society (extracurricular learning locations / museums)

6. Current status of project development
The foster parents can imagine that the boy named above will be schooled in the museum class. Two places in the TLG are still occupied, although the children no longer fit into the profile of the learning group. A follow-up perspective is being worked on here. A conceptual evaluation of existing learning groups and, if necessary, adaptation to existing needs is also planned.
The open-air museum on the Kiekeberg was the first museum to express its interest in starting a cooperation with the ReBBZ's education department. This cooperation could last the entire first half of 2020, cooperation opportunities with other museums are in progress.
Schooling is planned from 8 a.m. to 1 p.m. The learning group meets at the education department of the ReBBZ Harburg and drives together to the extracurricular learning location. The schooling for the first half of the year is shared by the museum educational service, a special educator from the education department, social educational specialists from youth welfare and, if required, school attendants.

7. The first stop: Kiekeberg open-air museum
The offer of the museum education service from Kiekeberg includes the following topics:
Food and Agriculture
natural Science
History of the region
The premises are very suitable: the museum class can be taught in a somewhat secluded building with its own room and extra cloakroom, which means that the distraction from other museum visitors can be kept to a minimum. This makes the Kiekeberg the first stop, as it makes it easier for the children to get used to this new project.
This school year, the museum class could start on September 7th, 2020 at the earliest. The museum offers 1.5 hours of lessons per day through the museum's educational service. For the cooperation, these lessons would have to be booked for at least three days a week. Including admission, room and site use, cleaning and electricity, the costs for this are € 100 per day per group. It is possible to book lessons for three days of the week, for the remaining two days only admission as well as room and site use (for € 40 per day per group).

7. Financing

For the first half of the school year starting at Kiekeberg, there would be costs of € 6,360 for the museum, which would have to be raised.
The personnel resource can be composed as follows:
Special education classes by the education department
Support from school attendants for the complexly burdened student (see above)
Youth welfare resource from the relevant district youth welfare offices
It could also be checked whether e.g. the project fund "Culture and School" (see cooperation agreement) and / or the Hamburg Community Foundation can imagine support.
This cooperation project between a school and museums can also be thought of on a grand scale: there are already several European countries that have established such cooperations between primary schools and museums.

8. Conclusion
Why shouldn't this treasure be raised for particularly stressed primary school students at the ReBBZ Harburg and the TLG? There is no better place than a museum full of ideas for children who had to experience at the beginning of their school career that they were overwhelmed at a school and had many conflicts.
The open-air museum on the Kiekeberg in particular offers a particularly stimulating learning environment with its open and diverse offers, its hands-on stations in the open-air area and real encounters with nature and animals. Because the learning stations often include the creation of a product (planting, watering, caring for animals, weaving baskets, building mud huts, etc.), special attention is also paid to emotional development and group processes.
